

LOGAN DARRIEL COLLINS

Senior Frontend & Web3 Developer

+1 (516) 654-4426 • hermes8527@gmail.com • <https://www.linkedin.com/in/logan-collins-46ba62322/> • Lyons, GA, US

Experience

Brewlabs — <https://brewlabs.info/>

Senior Full Stack Blockchain Developer

04/2023 - 03/2024

Brewlabs is a Binance Smart Chain utility project responsible for a number of community tools and platforms within the cryptocurrency space.

- Developed UI Kit which is a kind of library containing UI components to make reusable components and published it as a node module
- Used the UI Kit to implement pixel-perfect and mobile-responsive frontend in the Company Landing Page
- Hosted and configured CI/CD Pipelines for the landing page with AWS EC2, CodeBuild and CodeDeploy
- Composed UI for Staking and Farming functions and used Ethers.js to integrate Web3 collaborating with Smart Contract team
- Collaborated with backend team to use proper APIs in every frontend pages
- Collaborated with company executives to improve the UI and platform functions and guided users to use the platform in the precise and the best way in the product community

SparkWorld*

Senior Full Stack Blockchain Developer

04/2022 - 03/2023

- Collaborated with the CTO to clarify and define the main features of NFT Marketplace and Aggregator
- Made detailed documentation of the system design and workflow of these projects
- Led the frontend team to implement pixel-perfect, detail-oriented, and mobile-responsive frontend from Figma design
- Collaborated with Smart Contract team to integrate Web3 with Ethers.js library in the frontend using functions from the Smart Contracts
- Took part as a key member and resolved the conflicts between dev teams in the daily stand-ups and weekly and monthly meetings
- Installed CI/CD pipelines on AWS services for frontend side of the products

Satang Technology — <https://satang.com/>

Senior Full Stack Blockchain Developer

04/2020 - 03/2022

Satang Technology is a tech company focusing on blockchain technology and cryptocurrencies providing full loop consulting and development

- Implemented pixel-perfect and mobile-responsive frontend in React from Figma design of company landing page
- Hosted and configured CI/CD pipelines for the company landing page on AWS
- Implemented pixel-perfect frontend in React to create and manage assets on Asset Tokenizer Project
- Worked with backend developers to process data from frontend and retrieve data from database
- Collaborated with Smart Contract team to integrate Web3 to consume functions from Smart Contracts for tokens and Marketplace
- Deployed frontend on the GCP platform

Polisport — <https://polisport.com/>, <https://polisportvirtualtour.com/>

Senior Full Stack Developer

04/2019 - 03/2020

Polisport Group is a company developing and manufacturing Motorcycle & Bicycle Parts & Accessories

- Created reusable components and composed them to implement pixel-perfect frontend according to Figma design in React
- Used Redux for global state management in frontend
- Wrote unit test scripts for every components in frontend using libraries like Jest, Sinon, Mocha, and Chai
- Consumed RESTful APIs referencing the endpoints and descriptions through Swagger documentation and collaborated with backend team
- Led Polisport Virtual Tour Project to implement the main UI in React and used the Three.js library for virtual tour in the 3D virtual environment
- Utilized AWS services like EC2 for hosting, DynamoDB for database, and CodePipeline to configure CI/CD pipeline

Canary Technologies — <https://glassbororentals.com/>, <https://ventano.de/>, <https://hoteline.travel>

Full Stack Developer

04/2016 - 03/2019

- During six-month internship as a developer, I gained valuable insights into company culture and development methodologies working in an Agile Environment using tools like JIRA for project management, Git for version control, and Web technologies like Laravel, HTML, CSS, and JavaScript
- Created smooth and visually appealing user interfaces as a Frontend Developer in Laravel Blade, HTML, CSS, and JavaScript in the Glassboro Rentals project
- Designed MySQL database and contributed to three pages in Laravel as a Full Stack Developer in an ECommerce project called Ventano
- Took part in as a key member in Hotline project which is a hotel management platform

Summary

Logan Collins is a passionate and self-motivated Senior Frontend & Web3 Developer specializing in React, Vue.js, Ethers.js, and Web3.js. He enjoys architecting, designing, planning, and implementing projects from scratch and worked in various sizes of companies from start-ups to enterprises. He's good at implementing pixel-perfect, mobile-responsive, and detail-oriented frontend from the design and loves to give advice to the design team to make it more beautiful and efficient. He's eager to learn new technologies and he acquired Blockchain technology focusing on integrating Web3 to work in on-chain services.

Education

DePaul University	Chicago, IL
Bachelor of Computer Science GPA: 3.9 / 4.0	2012 - 2016

Skills

Blockchain: Blockchain • Ethereum • Web3 • Ethers.js • Web3.js • Solidity

Frameworks & Libraries: React • Redux Thunk/Saga • Next.js • Vue • Lit • Bootstrap • Tailwind CSS • jQuery • Three.js • D3.js

Communication: RESTful APIs • WebSocket • GraphQL • RPC

Languages: JavaScript • TypeScript • PHP

Development & Operations: Scrum • Agile

Version Control Systems: Git • GitHub • GitLab • Bitbucket

DevOps: AWS • GCP • Docker • Kubernetes
